# Documentation for Downloading SmartUp Content

Please note that the steps listed in this document are applicable to the **Google Chrome** browser.

To begin, you will first need to download two extensions on Google Chrome and enable them on your browser:

1. [SingleFile](#)
2. [Download All Images](#)

Once you have successfully installed the extensions, you will be able to download the various content on SmartUp modules.

Depending on the type of content you wish to download, there are different steps to follow.
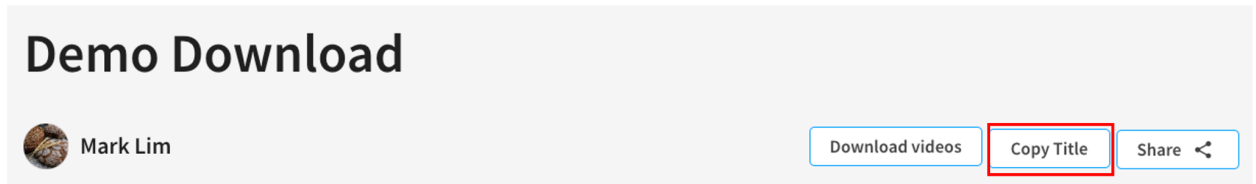

**Downloading a Copy of the SmartUp Content**

This allows you to download a copy of the SmartUp webpage as a html file, which you can reopen on a separate browser. Do note that when you download the page as a html file, you will not be able to save a copy of any videos or PDFs on the page.
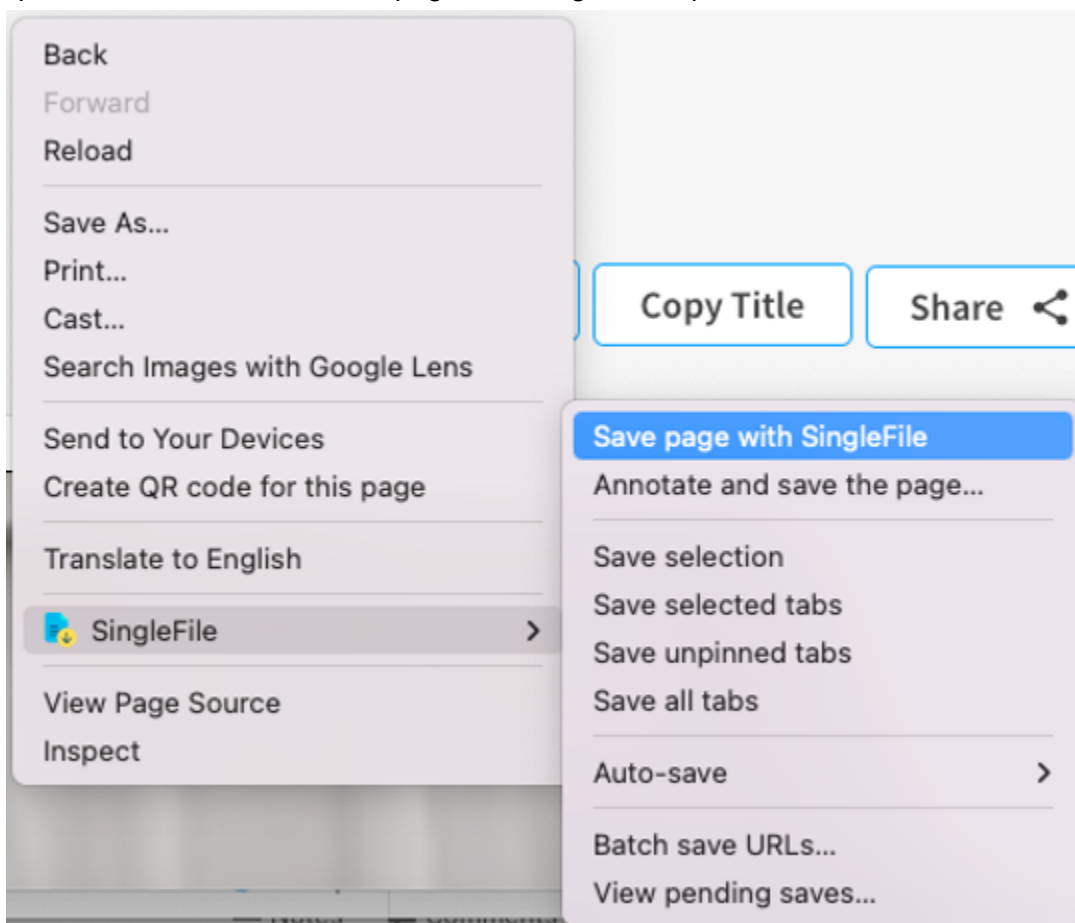

Before you begin, it is recommended that you first enable the Google Chrome setting that allows you to name each file and choose the download location. This will allow you to name each saved file and group the files into the folders that you want. This can be accessed by opening the **Settings** page on Google Chrome, navigating to the **Downloads** menu and enabling the toggle that reads "Ask where to save each file before downloading".

Follow these steps to download a copy your SmartUp content as a html file.

1. Before you begin, complete the piece of content by finishing all cards.

2. Click on the **Copy Title** button to copy the title of the piece of content you wish to save.

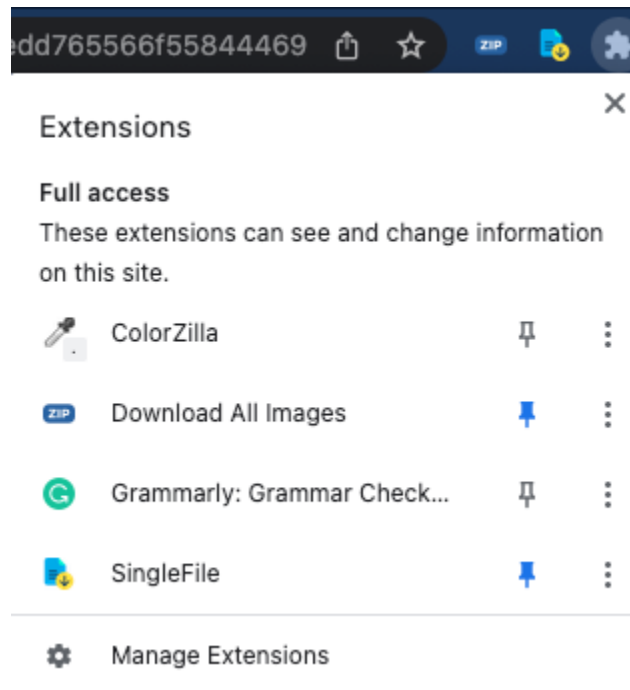

3. Launch the SingleFile extension by right-clicking on the page, selecting the SingleFile option, and then on the "Save page with SingleFile" option.

4. The extension will begin saving a copy of the page, prompting you to rename and save the file. Paste the content title that you copied earlier in Step 2 and save the file.

5. You will now be able to open the file in the browser of your choice.
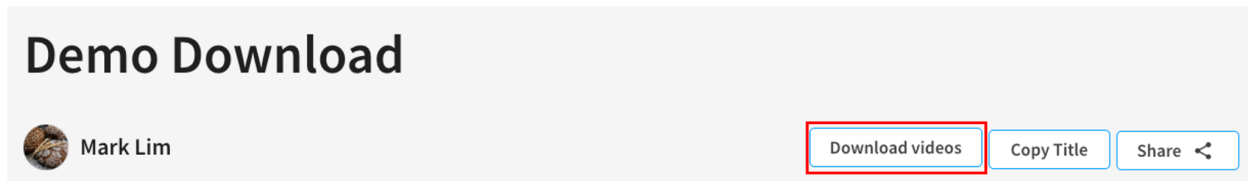

**Downloading a Copy of All Images on SmartUp**

Similar to downloading a copy of your content as a html file, you will have to complete the piece of content before downloading all images. Once the piece of content is completed, launch the **Download All Images** extension in the extensions menu and click on the icon. This will download a copy of all images on the page as a zip folder onto your device. After extracting the images from the folder, you will be able to use the images as needed.

**Downloading Videos from SmartUp**
To download videos on Smartup, first click on the Download videos button.

This will launch a popup with all the available videos in the piece of content.

Clicking on each video will open a separate tab in your browser, where you have the option to download the video.
